

OKASBO Spring Conf. Technology Session Descriptions

K12 Technology Pillars with Dell Technologies! By Dell Technologies

Review Technology Solutions as they relate to K12. Experience Digital Transformations in K12 through Workforce, Infrastructure and Security Transformations. Summary via: Solutions, Services, Devices, Applications, Datacenter Architecture, Cloud Enablement, Security and Data Protection Strategies.

Interested in your district going paperless? By Registration Gateway

We specialize in online registration and electronic student records. Registration Gateway is a complete online student registration system used by many districts in OK and other states

Cabling Construction & Internet/Network Security by Twotrees

Strategies for planning proper cabling and best practices when it comes to infrastructure and network security.

1:1 We are in it for the long haul by Trinity3

Ensure all your devices last a full 4 year cycle

“Fiber is down...I have NO internet connectivity for my network across the district...HELP!” by VIP Voice Services

VIP has a solution we are offering our school districts around the state to utilize their exclusive unlimited Cellular Data connectivity in a monthly package that can save your network connectivity in the case of internet failure or outage. We can keep your Dial-tone, Data network and even IP camera network Online!

Network Access Control by Aruba

Visibility, Control and Response to today's Security challenges

“Shouldn't your clock in/clock out data live with your absence data?” by Frontline

This presentation will show you how to consolidate processes and manage importing payroll data into your finance and payroll system all in an automated process. An absence solution shows you who isn't here and a time keeping solution shows you who is here. Redundant and manual processes are using up valuable time, allowing human error, and preventing transparency. It no longer makes sense to have fragmented solutions that don't talk to each other.

School Safety and Security with Avigilon Solutions for Education by Avigilon

Learn how Avigilon Control Center with Appearance Search™ Technology can help you sort through hours of footage with ease to build robust video evidence, and create a powerful narrative of events in a single export file to improve forensic investigations. Instantly lock down school grounds with the push of a button using the Access Control System which also integrates with the H4 Video Intercom allowing operators to communicate with school visitors to approve or deny entry. See how our self-learning video analytics can provide preventative protection by alerting you to events happening on school grounds to provide a safer environment for your students and staff.

Keeping students safe: Filter, manage, monitor, & protect your students with a complete 1:1 platform by LightSpeed

Web filtering in today's schools is about more than blocking and allowing web sites; it's also about keeping students safe — from inappropriate content as well as from things like self harm, bullying, and school violence. In this session, you'll learn how to filter, manage, monitor, & protect your students. You'll learn how:

- Dynamic reporting can give you detailed, granular reports on individual students
- Smart Agents solve SSL decryption without the hassles of proxies, PAC files, or trust certs
- AI-based insights and real-time alerts on concerning student activity
- Remotely set policies to every device and OS
- And more!

Securing Your Organization against Email Borne Threats: Advanced Security & Compliance by Barracuda

Secure email gateways are no longer sufficient to defend against today's sophisticated social-engineering attacks. These attacks bypass traditional security and end up costing organizations time, money, and brand equity. A multi-layered approach is the most effective solution to prevent targeted social-engineering attacks. Total Email Protection combines a secure email gateway, AI-powered fraud protection, and advanced security awareness training. This results in comprehensive protection against business email compromise, account takeover, and other advanced email threats.

Managing security while staying within your budget by Peak Uptime

Educational institutions face a plethora of IT challenges and typically must solve them with limited budgets. With ever-increasing bring your own devices by students, faculty, and administrators, educational organizations need to scale bandwidth and provide secure access. Sensitive information must be secured and compliance standards protecting students, such as Health Insurance Portability and Accountability Act (HIPAA), Children's Internet Protection Act (CIPA), and Family Educational Rights and Privacy Act (FERPA), must be met. While it's key for educational institutions to have the latest security and networking technologies, limited budgets can make it seem impossible to purchase and then find the resources to manage them.
